From TRISTAN to Tomorrow: A Four-Decade Journey in Global Physics, Leadership, and Equity

Young-Kee Kim

The University of Chicago

Reflecting on a four-decade journey as an experimental particle physicist that began in 1986 as a graduate student on the AMY experiment at Japan's TRISTAN collider, this talk explores the vital role of international communities in shaping our field. We will discuss efforts to strengthen global connections through Physics Societies and through the exercise of building long-term strategies for the field, and dedicated initiatives to advance women in science.
